DEVELOPMENT & IMPLEMENTATION

When developing a product, we consider its entire life cycle, actively control the product development process (e. g. choice of materials, manufacturing processes) and pay attention to cost- and resource-saving production as well as the recycling of raw materials with as little residue as possible.

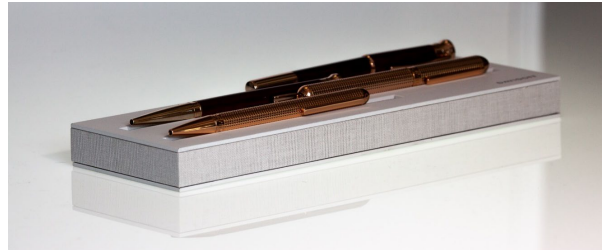

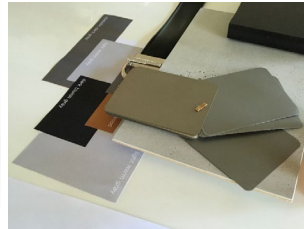

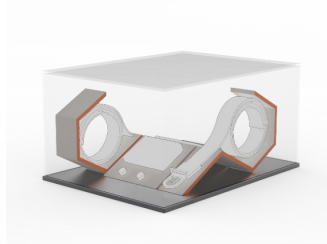

COMPETENCES

- Development
- Prototype
- Single parts
- Small series
- Roll-outs
- Ecological consideration

DISPLAY & POS

We develop and realise creative small pieces of furniture, according to your ideas or in cooperation with external designers in order to optimally present your goods and services. After development, we coordinate production from small series products to large series for national and international roll-outs, including packaging, warehousing and transport.

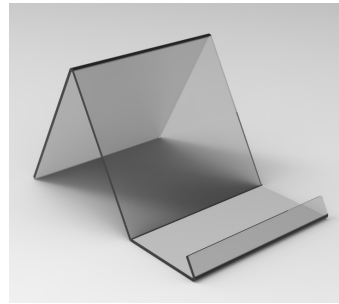

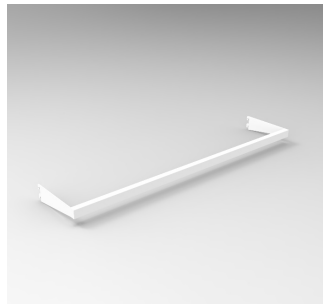

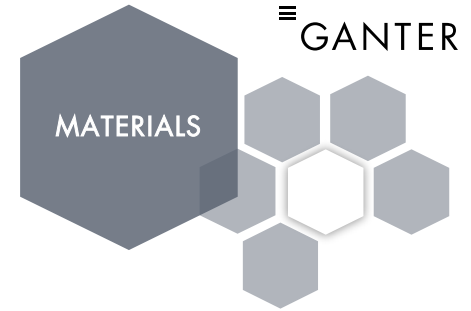

COMPETENCES

- Development
- Prototype
- Mockups
- Small series
- Roll-outs
- Ecological consideration

CHOICE OF MATERIALS

Material definition is a key element in product development. We support you in finding the ideal material for your product, taking into account function, design, cost, and sustainability. We also check availability (today and in the future), supply chain security and quality assurance evidence.

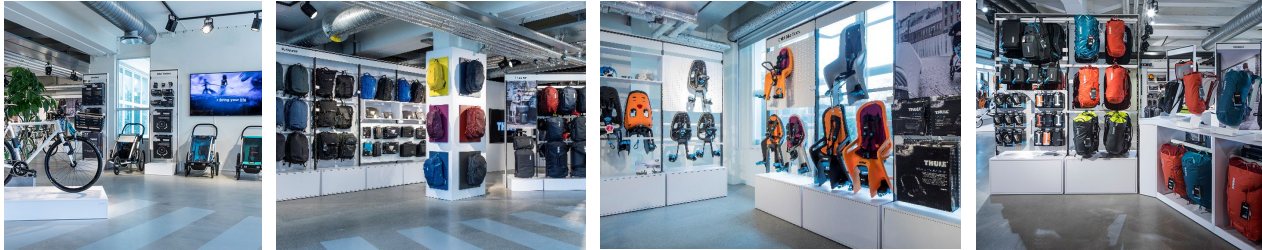

COMPETENCES

- Material research
- Function tests
- Samples
- Mood boards
- Quality assurance
- Certifications
- Ecological consideration

SHOP IN SHOP

Our intercultural team consists of industrial designers, construction engineers and specialists for purchasing, implementation and processing. From the first idea to the finished product, we offer a complete service, whereby it is up to you whether the 'whole package' or only individual services are required.

Visual Merchandising: from the conception of the shop window to the design of the store front – Ganter ensures the optimal presentation of your products.

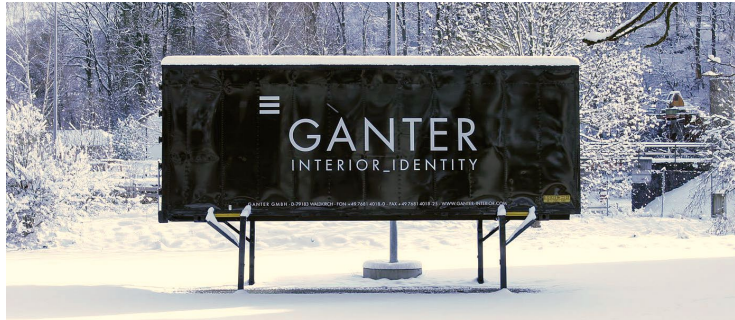

COMPETENCES

- Concept development
- Floor plan
- Visualisation
- Individual design
- Ecological consideration

WAREHOUSE & LOGISTICS

With global competence and local know-how, we ensure the on-time realisation of individual store and interior fitting projects worldwide, as well as large and international rollouts. We take over the complete warehouse and transport management for you. Whether buffer storage or forward freight, questions regarding import and customs clearance, cost- or CO²-optimised delivery, all aspects are taken into account.

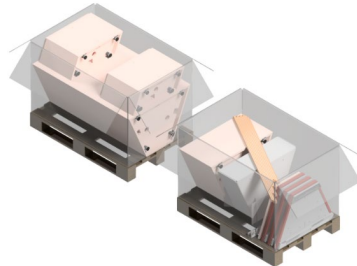

COMPETENCES

- Rollout-management
- Warehouse operations
- Transport logistics
- Customs clearance

CERTIFICATIONS

Our AEO-F certification facilitates customs clearance and allows us to complete projects all over the world on schedule.
